MUHAMMAD DETA ADITYA

Senior Fullstack Engineer

Location: Jakarta, Indonesia | Phone: +6287715085671 | Email: muhammaddetaaditya@gmail.com | LinkedIn: https://www.linkedin.com/in/deta-aditya | GitHub: github.com/deta-aditya | Personal Website: https://deta-aditya.github.io

SUMMARY

Senior fullstack engineer with 7+ years of building scalable architecture at rapid-growth fintech and e-commerce companies. Specializing in TypeScript and React with deep experience in Clean Architecture, Functional Programming, and cross-functional technical leadership.

EXPERIENCE

FULL-TIME SENIOR FULLSTACK ENGINEER

PT. FINACCEL FINANCE INDONESIA (KREDIVO) | *Jakarta, Indonesia* | August 2024 - Now

- Maintained 8+ frontend & backend services under 3 different squads (Growth, B2B International, Biller). Worked on React, TypeScript, Express-based Backend-for-Frontend, and Go
- Initiated, developed, and maintained the company's design system implementations for desktop and mobile in a form of private npm first-party package using TypeScript, React, and Emotion, as well as Storybook documentation, dedicated for fullstack engineers consisting of 20+ components, affecting all fullstack projects in the company.
- Initiated and managed the company's design system fullstack implementations' SDLC workflow, governance, and contribution guide for fullstack engineers in the company.
- Integrated an automation pipeline for the publication of desktop and mobile packages for the design system to the storybook host service, using JumpCloud SSO, BitBucket Pipeline, and AWS CodeArtifact integration, effectively cutting the 50% of manual process for merging latest version of the package into the host service.
- Achieved 80%+ unit test coverage applying Functional Programming based Code Convention and Functional Core Imperative Shell Clean Architecture.
- Supervised 10+ large scale projects from end-to-end, from a user facing campaign page integrated with Rive animation and complex modern CSS to complex promo and campaign dashboard form.
- Cut development time by 50% for Rive integrated frontend projects by applying a standardized animator-to-frontend contract document.
- Conducted a company-wide engineering session with 100+ attendees for standardizing fullstack quality standards across the company.
- Formalized quality standard of 20+ fullstack projects in the company as a core member of Fullstack Guild.
- Worked with 4 international tenants, namely Indonesia, Thailand, Philippines, and Vietnam.
- Interviewed 20+ fullstack engineer candidates and contributed in interview question banks for SDE 1-3 fullstack engineer recruitments.
- Worked on 6+ knowledge base documents for quality base for all fullstack projects, including Code Convention, Functional Thinking, Organizing Functional Codebase, Functional Core Imperative Shell Architecture, Algebraic Data Type, and Function Composition Patterns.
- Worked on 4+ reusable, stable, pure common libraries used by fullstack project for polyfilling TypeScript's capability, including Option and Result monad inspired by Rust and Haskell, Union type based on Algebraic Data Type and Functional Programming.
- Utilized agentic AI tools such as GitHub Copilot, and Claude Code in everyday work.

FULL-TIME SOFTWARE ENGINEER - WEB PLATFORM & BACK END

PT. GOTO GOJEK TOKOPEDIA (TOKOPEDIA) | *Jakarta, Indonesia* | July 2021 - August 2024

- Developed the TopAds Seller Dashboard frontend and TopAds Display Search backend services using various technologies, implemented unit testing with over 80% coverage.
- Initiated clean architecture standards for 25+ modules.
- Contributed to the Tokopedia Academy mobile app using Flutter.
- Maintained TypeScript's quality on over 20+ services by standardizing TypeScript linter and configuration for company-wide's frontend.
- Won 4th place as a mentor of a team of 3 fresh-graduates in a GoTo DevCamp 2023's hackathon event.

PART-TIME BACK END ENGINEER

PT. HABILIS SOLUTIONS INDONESIA | *Jakarta, Indonesia* | August 2023 - January 2025

- Developed multiple back-end services across various domains using Node.js, TypeScript, Express, and PostgreSQL
- Integrated Stripe, Brevo, Google Maps, S3, Twilio, and WebSocket
- Designed maintainable codebases reducing feature change effort by 50%.

FULL-TIME IT DIVISION MANAGER

PT. KREASI ANAK DALAM (LIVEIN.ID) | *Jakarta, Indonesia* | November 2020 - March 2021

- Managed a team of 7 engineers to develop a tourist app (Android & iOS), a PostgreSQL database, a Laravel dashboard, and a Go backend.
- Cut 20% work effort applying a standardized code base optimized for unit test and scalability across all codebase.

FULL-TIME FRONT END ENGINEER

PT. VIRKEA EMPRESA SISTEMA (PROCURA) | *Jakarta, Indonesia* | July 2019 - December 2020

- Developed a procurement system for 20+ clients, including large businesses and multinational corporations, using Angular.js and CoffeeScript
- Contributed to 10+ modules of React + TypeScript procurement 2.0 research in order to ship a more maintainable and standardized product.
- Contributed to 5+ backend development tasks using Ruby on Rails.

EDUCATION

UNIVERSITAS PERTAMINA (2016 - 2021) | Bachelor's Degree of Computer Science | GPA 3.68

SKILLS

- **Programming Languages:** TypeScript, JavaScript, Go, PHP, C#, F#, Dart, Rust, C++, Ruby
- **Frontend Tools and Frameworks:** HTML5, CSS3, ES6, React, Next.js, Redux, Zustand, SASS, Tailwind, Emotion, GraphQL, Jest, Playwright, jQuery, Vue, Elm, Bootstrap, Ant Design, Lottie, Rive
- **Backend Tools and Frameworks:** Node.js, Express.js, ASP.NET, Laravel, Ruby on Rails, PostgreSQL, MongoDB, AWS, Midtrans, gRPC, NSQ, Kafka, ElasticSearch
- **Other Developer Tools:** GitHub Copilot, Scalyr, New Relic, Datadog, Grafana
- **Principles and Practices**: Object Oriented Programming, Design Pattern, Dependency Injection, Domain Driven Design, Test-Driven Development, Clean Code, Clean Architecture, Functional Programming, Functional Core Imperative Shell Architecture, Functional Pattern (Functor, Applicative, Monad).
